PROFILE

Full-stack developer who designs, builds and ships products end to end. I founded Kiakia, a delivery platform I built alone: two native apps for iPhone and Android, a TypeScript and Node API, PostgreSQL, live GPS tracking and an admin dashboard. I work in TypeScript, React, React Native, SwiftUI, Node and PostgreSQL, ship quickly with AI coding tools, and care about reliability and security. Final-year Software Development student at MCAST.

EXPERIENCE

Founder & Full-Stack Developer · Kiakia — 2026 – Present

React Native, Expo, TypeScript, Node.js, PostgreSQL (Neon), Vercel, Google Maps & Routes, Agora

- Built a two-sided delivery platform alone: customer and rider apps for iPhone and Android, a REST API, database and admin site.
- Built smart dispatch (nearest riders, favourites first, atomic first-to-accept claim, trust tiers by parcel value, automatic rider pauses) and live GPS tracking.
- Added iPhone Live Activities and Dynamic Island, push notifications, in-app voice calls and pickup/delivery code verification.
- Hardened security: scrypt password hashing, rate-limited logins, session revocation, private photo storage with expiring signed links, CSP.
- Wrote the pitch deck and financial model; raising a pre-seed round.

Software Developer Intern · NightOwl Studios, Malta — Jun 2026 – Aug 2026

Flutter, Dart, Supabase, TypeScript, Deno

- Built features and fixed bugs across a live multi-app system used by restaurants, and contributed to end-to-end testing.
- Built a grants information chatbot with the Claude API and Supabase.
- Worked in a professional Git workflow: pull requests, code reviews and database migrations.

Freelance Web Developer · Self-employed — 2022 – Present

- Built and maintain the Her.aesthetic.dream e-commerce site (Nigeria): catalogue, orders, Paystack payments, admin dashboard, Cloudflare R2 storage and nightly backups.
- Built websites for small businesses, including a phone repair shop and a bakery.

Real Estate Agent (part-time) — Aug 2024 – Sep 2026
QuickLets, Malta

- Took clients from enquiry to signed agreement.

Sales Manager
Coka Supermarket

- Ran daily finances and stock; led a small team.

PROJECTS

Pulse · Study app for students and tutors (iOS) — build-with-pulse.netlify.app

Swift, SwiftUI, Supabase, Claude API, StoreKit 2, CallKit, APNs

- Native iOS app with focus sprints, an AI study assistant, planning, grades, community study rooms and tutor calls; AI served through a server-side proxy with per-user daily limits.

SpendWise · AI expense tracker app — spendwise-site.vercel.app

React Native, Expo, TypeScript, Supabase, Claude API, React, Stripe

- iPhone and Android app: type a sentence or scan a receipt and AI files the expense; budgets, savings goals, bills, shared households and an on-device money coach.

Also

- Gainly (AI calorie tracker, web and iOS, in progress) · 2D Unity game · published Roblox multiplayer game · Unreal Engine 5 world.

SKILLS

Languages	TypeScript, JavaScript, Swift, Dart, Python, Java, C#, PHP, SQL, HTML, CSS
Frontend	React, Vite, Tailwind, React Native, Expo, SwiftUI, Flutter
Backend	Node.js, REST APIs, PostgreSQL, Supabase, Firebase, MySQL, serverless (Vercel, Netlify)
Tools	Git, GitHub, Xcode, Android Studio/Gradle, Docker, AI coding tools (Claude Code)

EDUCATION

Advanced Diploma in Software Development · MCAST, Malta (final year) — 2024 – Present
